The Radionics 2000 Series Control/Communicators

Easily Control Your Security

Convenient, intelligent security. The Radionics 2000 Series security systems deliver the utmost in convenience and intelligence, backed by unparalleled reliability.

These systems collect information from sensors located in your home and communicate unusual occurrences to a monitoring station, which immediately calls for help.

The 2000 Series offers unique and practical security features, many of which are one-button operations — they couldn't be simpler to use!

Want to Step Outside?

Feel free. Now your family and your home will

remain secure when you go out to your car momentarily or step outside to meet your kids at the school bus. This "Step Outside" feature allows you to temporarily turn off a door's protective status by touching the Clear button, without turning off the rest of the system. When you've closed the door, press Clear once more and the door is secured again.

The System is Up Even When the Phone Line is Down

The 2000 Series provides an invaluable service. Certain models are available with UPLINK™, a feature that allows an alarm signal to reach your central monitoring station even when your phone line is down. You get all of the advantages of traditional cellular radio

technology and none of the disadvantages. By making this feature so affordable, there's no reason to go without this extra step in security anymore.

Savings and Convenience of a Wireless System

The 2000 Series supports wireless motion detectors, contacts and keypads. Save money on installation costs by eliminating the need to run wiring to each device. A wireless keypad allows you to turn your system on or off from outside the premises, providing greater convenience as well as security. Three wireless keypads are available, including a 4-button keyfob. Now turning your system on or off, sending a panic report, opening a door, or turning on a light is as easy as pressing a button. Wireless options give you increased flexibility to create a system that exactly fits your security needs.

Look for Factory-Trained Technicians

Our installers and service technicians are trained and certified. Strict testing for each product ensures that you get the best service and support available. Trained dealers receive certificates that authorize them to install our equipment and provide you with the service you deserve.

Saving You Money with Simplicity

The 2000 Series systems are compatible with Radionics' D222A and D223A Text Command Centers that have built-in help to guide you when using your system. Easy to use, these command centers make costly, user-error false alarms a thing of the past. Radionics' D202A and D220A LED Command Centers are also available.

Passcodes Keep You In Control

The 2000 Series systems allow you to issue one-time passcodes for a single-entry visitor. Up to eight different passcodes are available for family members or frequent guests.

Get a Professional Response

The best equipment maintained at a high level is still only as good as the response you get in an emergency. Highly-trained professionals at a central monitoring facility are ready to respond 24 hours a day, 365 days a year.

For more information, contact your local dealer and learn how the 2000 Series can provide the right security solution for you!
